Querying Data in S3 with Amazon Athena

Aim: Querying Data in S3 with Amazon Athena

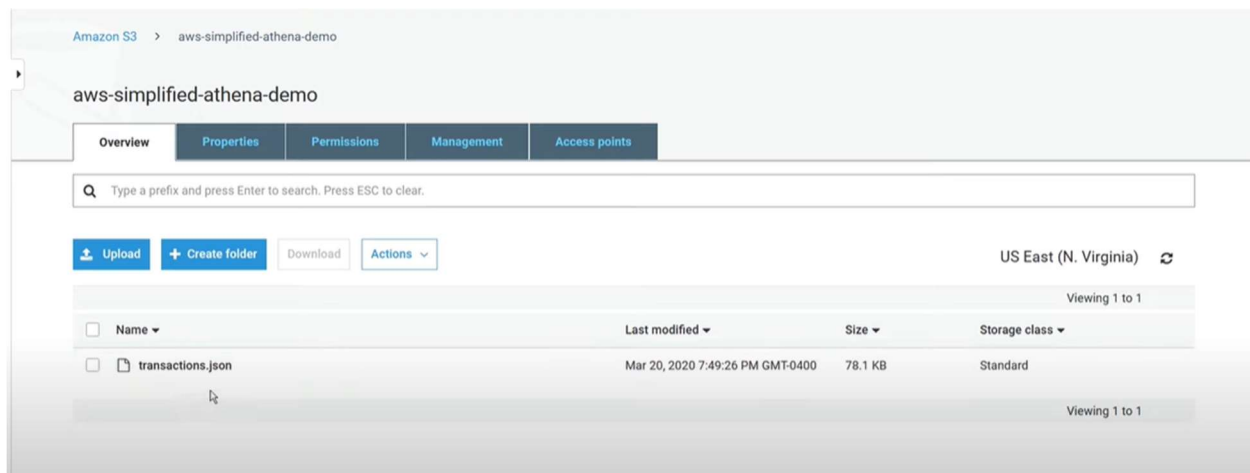

Step 1:

Go to buckets and create two buckets.

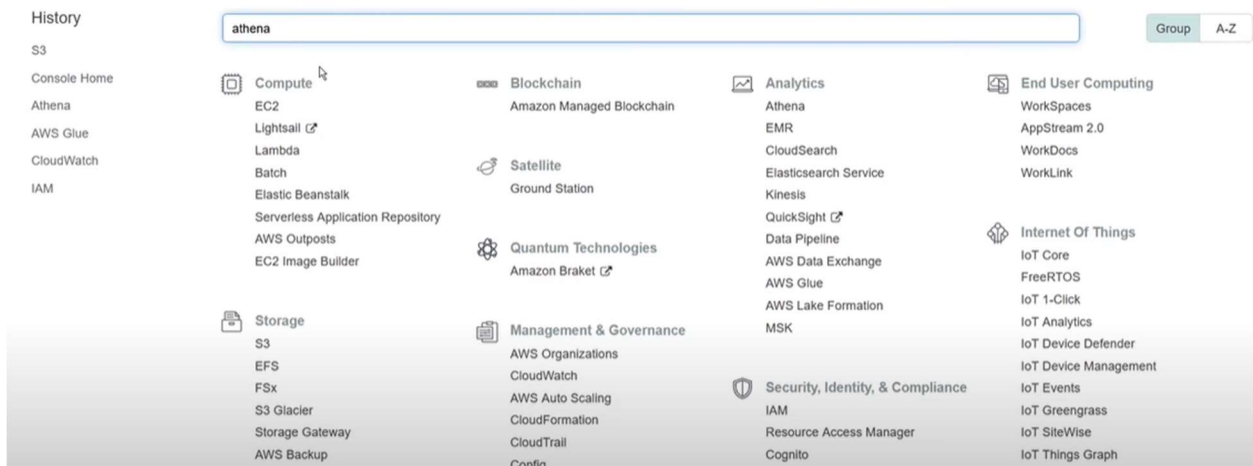

Step 2 :

After clicking onto the bucket add files to it.

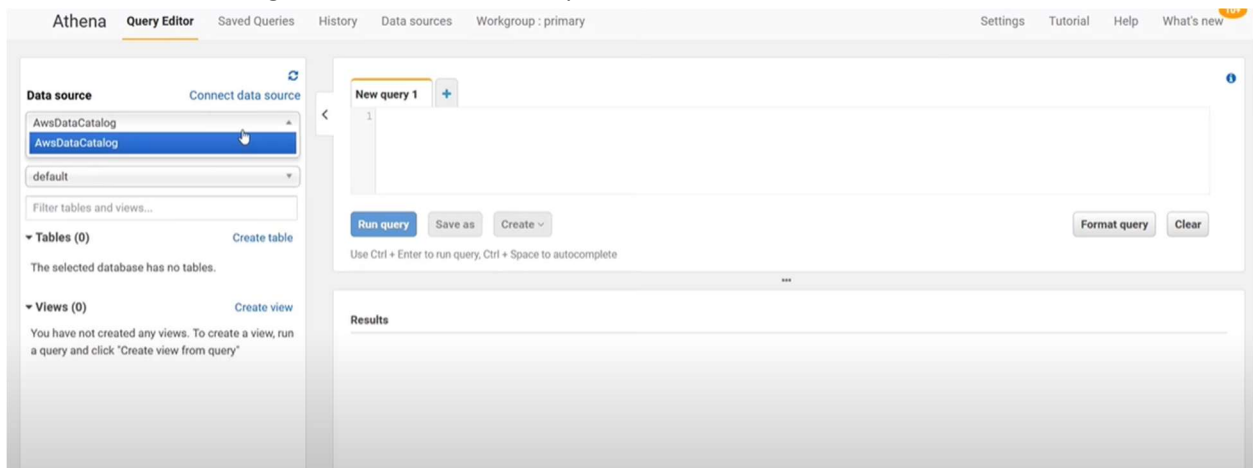

Step 3 :

Now go to Amazon athena.

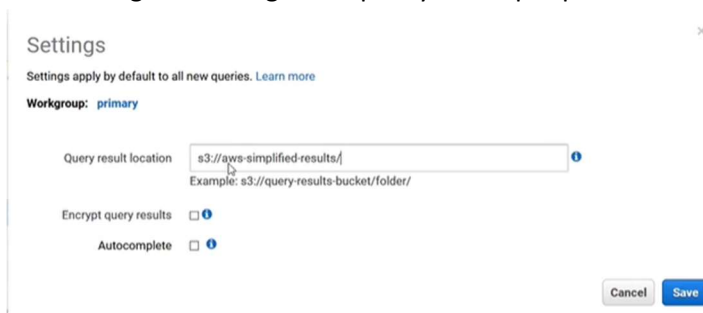

Step 4 :

Select AwsDataCatalog in the left side which is present in the data source tab.

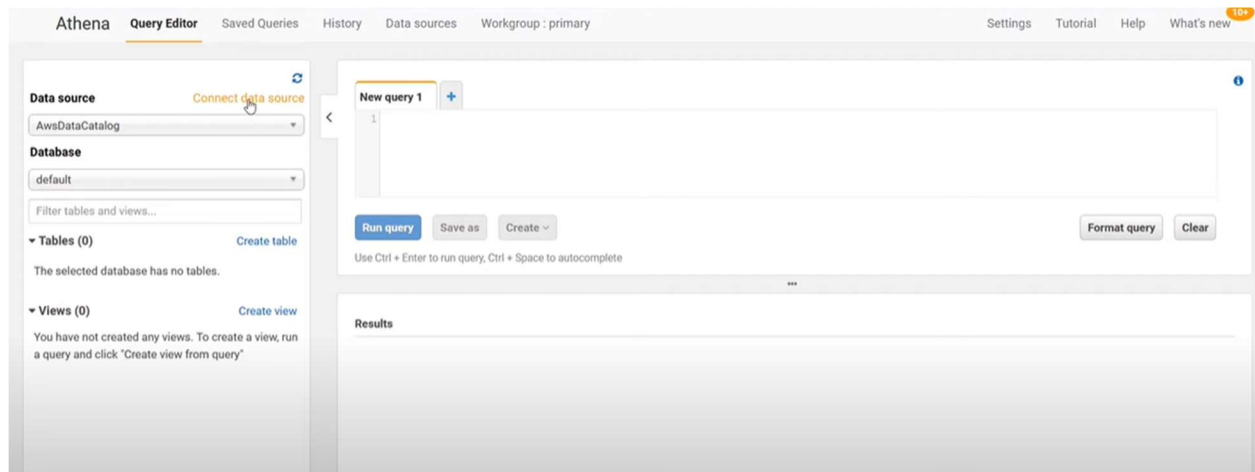

Step 5 :

After that go to settings and specify an output path.

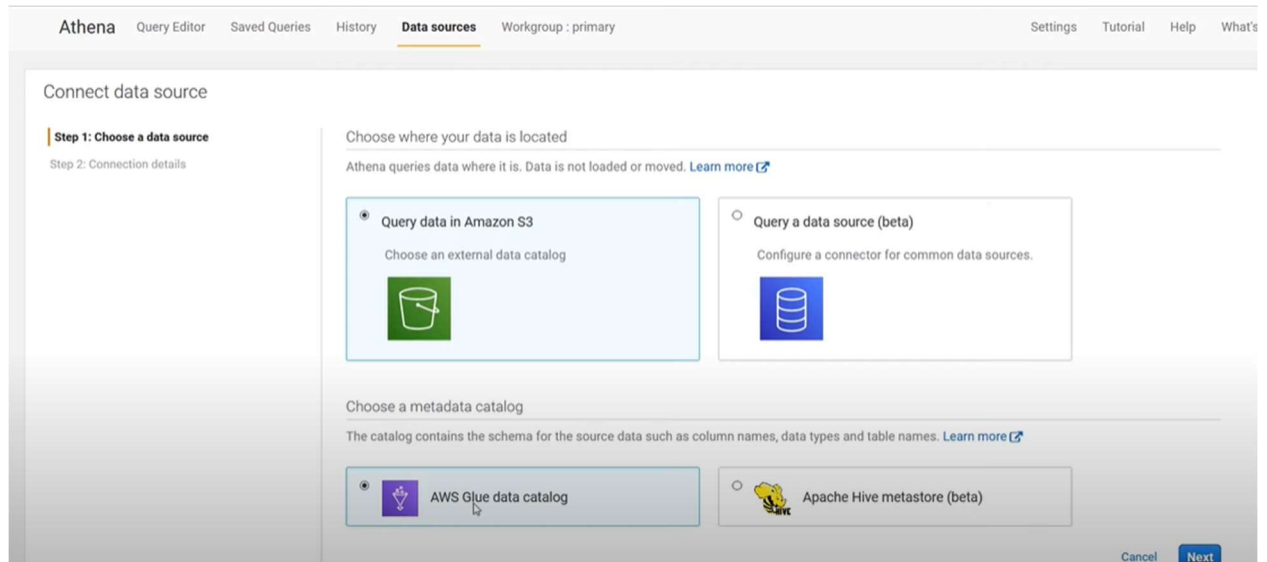

Step 6:

Click on connect data source.

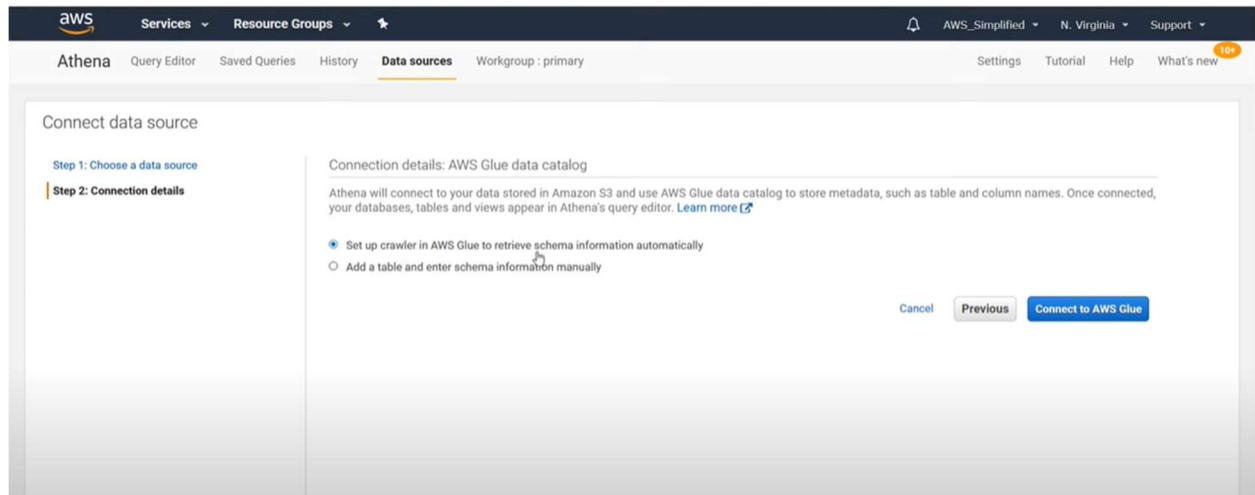

Step 7:

After clicking choose a query in amazon s3 and Aws glue data catalog.

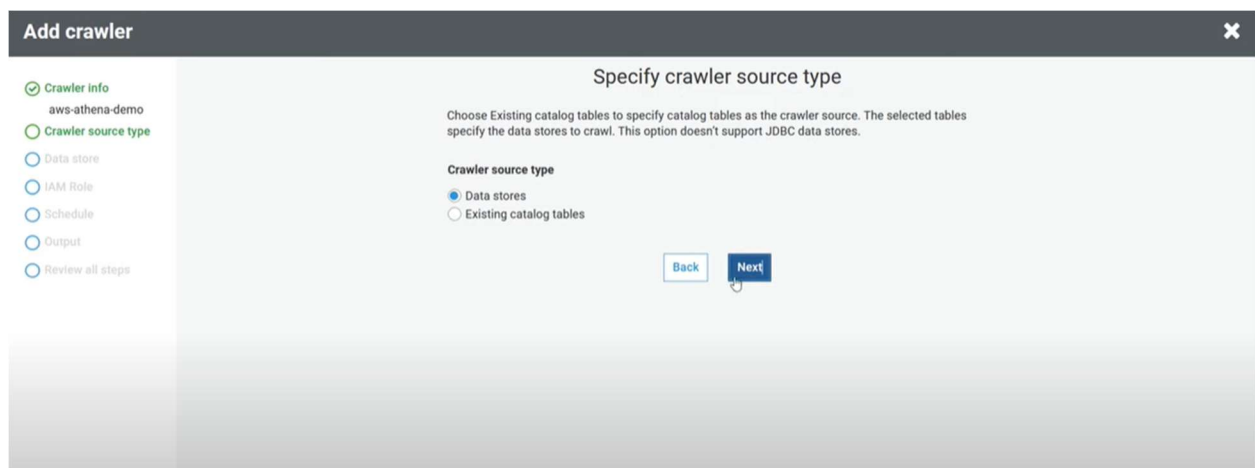

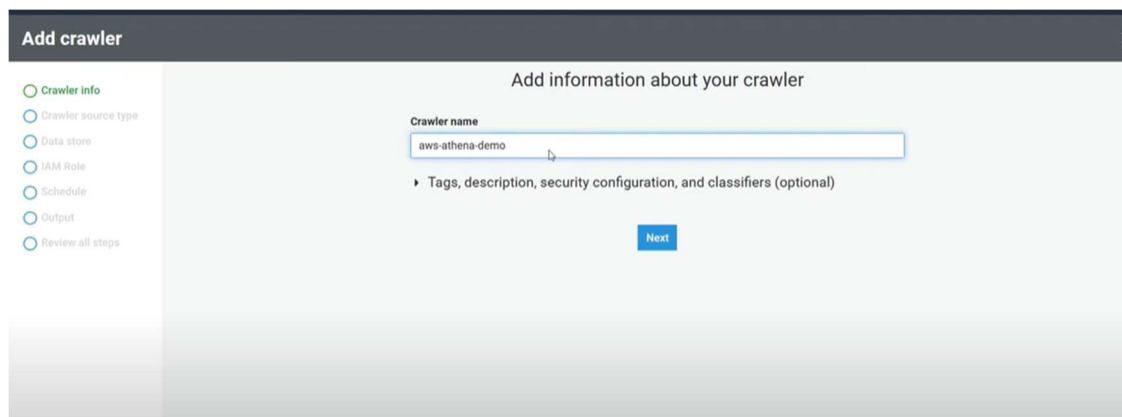

Step 8:

Click on next and select setup a crawler in AWS glue to retrieve schema information automatically.

Step 9: After selecting that it will redirect to a new page and add crawler and follow below steps to add a new crawler after setting up click on finish.

Add crawler

Crawler info

aws-athena-demo

Crawler source type

Data stores

Data store

IAM Role

Schedule

Output

Review all steps

Add a data store

Choose a data store

s3

Crawl data in

Specified path in my account

Specified path in another account

Include path

s3://bucket/prefix/object

Exclude patterns (optional)

Data store

IAM Role

Schedule

Output

Review all steps

Choose an IAM role

The IAM role allows the crawler to run and access your Amazon S3 data stores. [Learn more](#)

Update a policy in an IAM role

Choose an existing IAM role

Create an IAM role

IAM role

demo

To create an IAM role, you must have **CreateRole**, **CreatePolicy**, and **AttachRolePolicy** permissions.

Create an IAM role named **"AWSGlueServiceRole-rolename"** and attach the AWS managed policy, **AWSGlueServiceRole**, plus an inline policy that allows read access to:

- s3://aws-simplified-athena-demo/

You can also create an IAM role on the [IAM console](#).
